

Dear all,

we will be using Isaac physics with your physics classes. This class is to complete **all of the pre-A-level questions plus some essential mathematics.**

We are all very happy to help if you get stuck - just pop an email with the question number and we will reply with a hint.

YOU MUST get used to the way of working with Isaac - it is the single most important thing to figure out how to problem solve. You can go back and look at notes, use hints from the web or a textbook...but the reality is that you have to answer the question exactly correctly (as you will see).

Whilst this might seem like a lot - we are asking you to prepare in the same way as all previous year groups have prepared, but you have more time...a question a day keeps the doctor away...

If you think you may have been aiming for a 6 at gcse maths/physics then this is absolutely essential work to help you get up to speed before September.
