

# Shall we play a game? Tic Tac Toe

Task: To produce a Tic Tac Toe game for 2 players

## It should:

- Allow players to enter their name
- Tell them who should go next
- Have row and column numbers displayed
- Use row and column numbers to enter where the player wishes to place the x or o
- Prevent a player from placing an x or o in a position that is not empty
- Detect a win
- Detect a draw

## Extension:

- Create a CPU player
- Give the CPU rules on where to go
- Connect 4!

**Scaffolding - no direct guide here, but some things you might want to find out...**

1. How to create a 2d array in python
2. How to print a 2d array row by row
3. How reference a position in a 2d array
